

SOLO CIRRUS

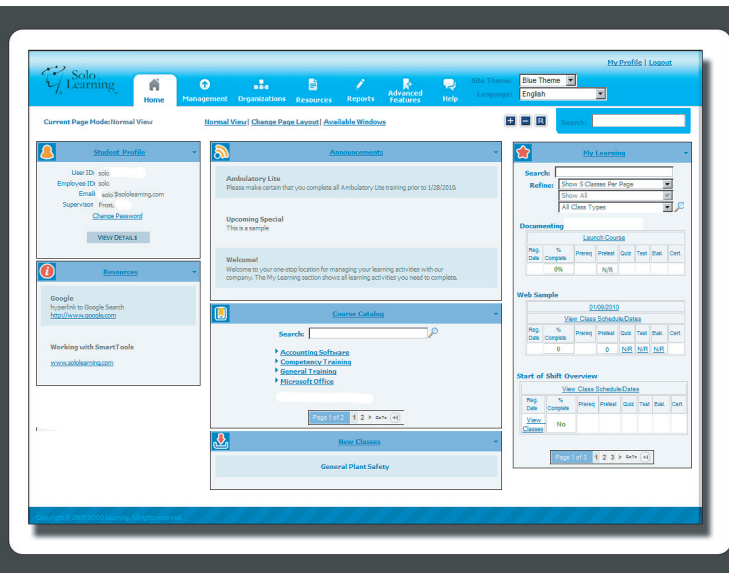

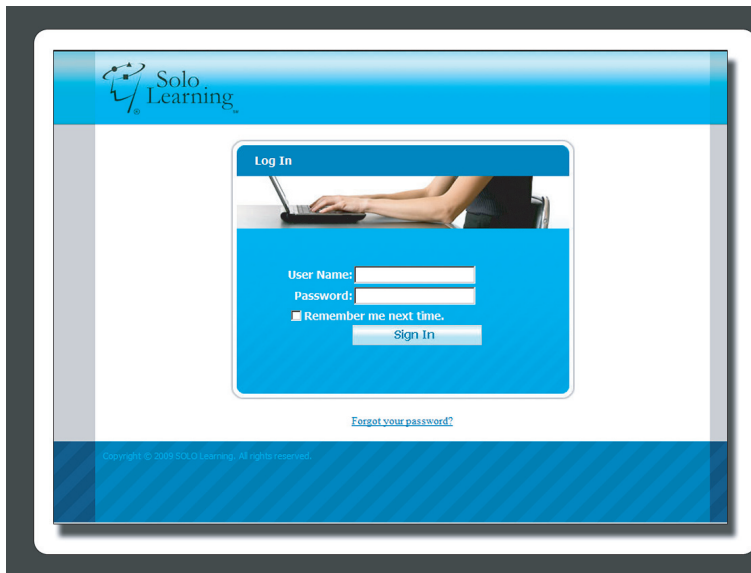

Learning Management System

Solo Learning's latest Learning Management System (LMS) featuring upgraded management, planning and delivery capabilities encompassing all learning needs within your organization.

Solo CIRRUS allows all levels of employees to manage their learning events from one source. Students get anytime anywhere access to learning events and materials including registration for instructor-led events, launching on-line courses, registering and attending Webinars and access to on-line resources*. Solo Learning's CIRRUS software enables administrator, managers, and supervisors to assign their students targeted learning events based on customized Learning Paths and/or the company's organizational structure.

*A computer with an internet connection is required to access Solo CIRRUS.

Features

New Features

- Integration with third-party applications like DimDim and WebEx.
- Interactive and highly-personalized Web experiences that work across all of the most popular browsers.
- Web protocol support for clients to build custom applications and portals.
- SQL Reporting service will be used for creating 100+ standard reports.
- Ability for the SOLO administrators to generate custom reports via the SQL Reporting Services report generator.
- Customizable student Web portal that allows for adding, moving and modifying the portal panels.
- Organization can be dynamically configured to handle any organizational structure.
- Chats at the site and class level.
- Support for RSS Feeds.
- Class module testing from the administrator site.
- Create Ad hoc surveys.
- Create polls.
- Unlimited custom fields for students.
- Dynamic HR/Bridge creation.
- Students will be able to have multiple learning group assignments.
- Assignment of classes at the organization level.
- Assign learning to students directly without assigning the learning to a learning group.
- Create class campaign to monitor a group of class completions over a timeframe.

Ease of Use

- CIRRUS supports both the AICC and SCORM reporting standards.
- Students are one click away from launching eLearning Courses, registering for Instructor-Led courses, or opening educational resources.
- Browser-based access by students and administrators removes location tie-down.
- Over 100 pre-built reports reduce the need for custom report generation.
- Automatic recognition, upon login, of spoken language preferences.
- Activity fired email templates keep students, administrators, and supervisors informed

Main Specifications

Utilize the SAAS (Software as a Service) Model to take the strain off your IT Department. System Requirements for the SAAS model are:

- An internet connected web device with a compatible browser**
 - Plug-ins as required by third-party content (Adobe Flash Player, JavaScript, etc.)
- When installed behind-the-firewall (standard software installation), minimum server specifications are:
- SQL Server 2005 • Microsoft Server 2000+ • IIS5+ • .NET Framework 3.5
 - Pentium 3+ processor 600+ MHz • 512 MB RAM
 - Hard Disk space is determined by the quantity of content to be stored in the system.
 - Network connectivity requirements are determined by user load

** Some administrative functions require Microsoft Internet Explorer 6+
